Stored Procedures

A stored procedure is created to get the average rating of seller.

```
CREATE PROCEDURE Get avg rating (seller id IN CHAR,
                                 seller fname OUT CHAR,
                                 seller lname OUT CHAR,
                                 avg rating OUT INT)
AS
BEGIN
    SELECT E fname,
          E.lname,
          Avg(F.rating)
    INTO seller fname, seller lname, avg rating
    FROM ebay_user E,
          feedback F
    WHERE E.user id = seller id
          AND F.seller_user_id = seller_id;
END:
```

Stored Procedures

A stored procedure is created to get the purchase history of buyer.

```
CREATE PROCEDURE Get purchase history (buyer id
                                                     IN CHAR,
                                       description OUT CHAR,
                                               OUT VARCHAR,
                                       name
                                       seller lname OUT CHAR,
                                       seller fname OUT CHAR,
                                       auction price OUT INT,
                                       direct price OUT INT)
AS
BEGIN
    SELECT P.pname,
           P.p description,
           E.fname,
           E.lname,
           A.min price,
           D.price
          name, description, seller fname, seller lname,
    INTO
   auction price, direct price
         product offer P,
    FROM
           seller S,
           auction A,
           direct buy D,
           ebay user E
   WHERE P.buyer_user_id = buyer_id
           AND P.seller user id = S.seller user id
           AND P productid = A productid
           AND P productid = D productid
           AND P.seller user id = E.user id;
END;
```

Triggers

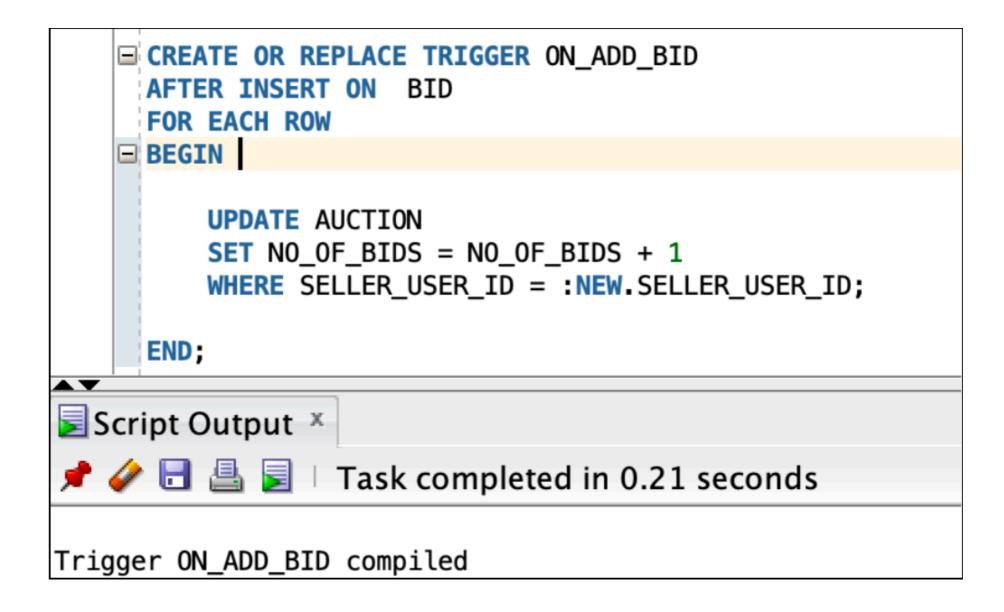

A trigger is created to validate the **bidding price on product.** Bid price must be greater than minimum value set by seller.

```
□ CREATE OR REPLACE TRIGGER VALIDATE_BID
     AFTER INSERT ON BID
     FOR EACH ROW
     DECLARE
         PRODUCT_PRICE CHAR(20);
   ■ BEGIN
         SELECT MIN_PRICE INTO PRODUCT_PRICE
         FROM AUCTION
         WHERE : NEW. PRODUCTID = AUCTION. PRODUCTID;
         IF :NEW.AMOUNT < PRODUCT_PRICE THEN</pre>
             RAISE_APPLICATION_ERROR( -20001,
                                   'BID VALUE SHOULD BE GREATER THAN MINIMUM VALUE' ):
         END IF:
     END:
Script Output *
